OBJECTIVE

Java Full Stack developer with hands-on experience building role-based web applications using Spring Boot, Hibernate, and MySQL. Proficient in end-to-end development from JSP-based server-side rendering to JavaScript-driven client-side validation. Looking for a software developer role where I can contribute to backend systems and grow into production-level engineering.

SKILLS

Programming Languages	Core Java (JSE, J2EE), JavaScript, SQL.
Web Technologies	HTML5, CSS3, Bootstrap.
Frameworks/Libraries	Spring Boot, Spring Data JPA, Dependency Injection, REST APIs, Microservices, Hibernate, Swagger/API Documentation, ORM.
Databases	MySQL (Database Design, RDBMS).
Developer Tools	Git/GitHub (Version Control), Eclipse, IntelliJ IDEA, Visual Studio.
Methodologies	Agile (Scrum), SDLC (Software Development Life Cycle), Unit Testing.
Soft Skills	Problem-solving, Cross-functional teams, Strong Communication.

PROJECTS

Quick-Drop: Role-Based Courier Management System

- Architected and deployed a Java-based Dynamic-Web application using JDBC to manage courier logistics with distinct functionalities for Admin, Customer and Agent roles by implementing role-based access control (RBAC).
- Utilized JSP for dynamic server-side rendering and JavaScript for client-side form validation, improving user experience and reducing server load and cutting form submission errors by 40%.
- Developed optimized CRUD operations in MySQL to track real-time shipment status, ensuring 100% data consistency across multiple user roles.

Dual Access Control For Cloud Based Data Storage And Sharing

- Developed a dual access control solution that significantly improved data confidentiality and integrity for cloud-based storage and sharing.
- Designed a scalable, modular architecture to manage secure data sharing between multiple users while minimizing permission-overlap vulnerabilities.
- Implemented encryption-backed data storage workflows
